

Exercise 3

Laís Saloum Deghaide, nUSP: 11369767

2. The margin property controls the space outside an element, and the padding property controls the space inside an element.

3. The correct way to specify values for the 4 different sides for padding is: the first padding applies to the top, the second to the right, the third to the bottom and the fourth to the left. As described above:

```
body {  
  padding: 10px 12px 13px 17px;  
}
```

4. `.btn.green { /* Styles for element(s) with btn AND green classes */ }`
